Priority

1. Acknowledgment is made of applicant's claim for priority under 35 U.S.C. 119(a)-(d) based upon an application filed in Japan on Dec. 25, 1997 and April 27, 1998. A claim for priority under 35 U.S.C. 119(a)-(d) cannot be based on said application, since the United States application was filed more than twelve months thereafter. Not that applicant has not claim priority to PCT/JP98/05962. It is noted that this application appears to claim subject matter disclosed in prior Application No. PCT/JP98/05962, filed Dec. 25, 1998. A reference to the prior application must be inserted as the first sentence of the specification of this application or in an application data sheet (37 CFR 1.76), if applicant intends to rely on the filing date of the prior application under 35 U.S.C. 119(e) or 120. See 37 CFR 1.78(a). For benefit claims under 35 U.S.C. 120, the reference must include the relationship (i.e., continuation, divisional, or continuation-in-part) of all nonprovisional applications. Also, the current status of all nonprovisional parent applications referenced should be included.

If the application is a utility or plant application filed under 35 U.S.C. 111(a) on or after November 29, 2000, the specific reference to the prior application must be submitted during the pendency of the application and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior application. If the application is a utility or plant application which entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the specific reference must be submitted during

Art Unit: 1732

the pendency of the application and within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) or sixteen months from the filing date of the prior application. See 37 CFR 1.78(a)(2)(ii) and (a)(5)(ii). This time period is not extendable and a failure to submit the reference required by 35 U.S.C. 119(e) and/or 120, where applicable, within this time period is considered a waiver of any benefit of such prior application(s) under 35 U.S.C. 119(e), 120, 121 and 365(c). A priority claim filed after the required time period may be accepted if it is accompanied by a grantable petition to accept an unintentionally delayed claim for priority under 35 U.S.C. 119(e), 120, 121 and 365(c). The petition must be accompanied by (1) the reference required by 35 U.S.C. 120 or 119(e) and 37 CFR 1.78(a)(2) or (a)(5) to the prior application (unless previously submitted), (2) a surcharge under 37 CFR 1.17(t), and (3) a statement that the entire delay between the date the claim was due under 37 CFR 1.78(a)(2) or (a)(5) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. The petition should be addressed to: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Drawings

4. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: page 17, "first pellet feeder 30". A proposed drawing correction or

Art Unit: 1732

corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

5. The disclosure is objected to because of the following informalities: Page 17, line 9 is unclear as to what are not contacting during the "preventing contact".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1-10 and 26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 2, 3, 4, 5 and 6, line 3 "an opposite side" is unclear as to what it is opposite.

Claim 26, line 2 "400" should be changed to --40--.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 1-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takayama et al. (Offenlegungsschrift 19646432 equivalent to U.S. Pat No. 6,187,229) taken together with Kopernicky Pat. No. 4,632,564.

10. Takayama discloses an injection molding apparatus and process with a gas feeder 37a for feeding at least gas into the injection screw barrel at a location opposite the injection nozzle, a resin pellet feeding passage 37 for feeding resin pellets into the injection molding apparatus, a pellet exhaust gas passage 50 for passing moisture and exhaust gas which are generated when the resin pellets melt in the injection molding apparatus and a decompressor, vacuum 50a, connected to the exhaust gas passage for exhausting the moisture and the exhaust gas from a pellet feeding passage side to an outside of the injection molding apparatus. Kopernicky teaches the use of a feeding regulator and an exhaust in the feeding passage for an injection molding apparatus. It would have been obvious to a person of ordinary skill in the art to combine the pellet feeder of Kopernicky with Takayama so as to provide the desire amount and condition of the feed pellets to the injection molding apparatus. The amount of decompression of the decompressor would clearly depend upon the distance between the decompressor and the injection molding barrel since the decompressor would have been operated such as to remove the exhaust gases and moisture.
